Global Governance and Endogenous Civilization

With the current uncertainties in the global economy, countries need to coordinate their policies to ensure stable growth. The United Nations is expected to play a more significant role in this process. China is committed to building a global governance system, and this is reflected in its efforts to promote the Belt and Road Initiative. At the G20 summit, China proposed a comprehensive and innovative approach to global governance. The Chinese model focuses on shared prosperity and peaceful development. If successful, it could provide a new model for international cooperation.

We are making headway to deepen China's engagement in global governance and international cooperation. China has contributed to the development of the world economy and committed to building a community with a shared future for mankind. Today, China has become an important member of the international community, and its role and influence continue to grow.

Smart Urbanization and Environment Improvement

As the world's leading energy producer and consumer, China is committed to reducing its carbon footprint. China's government has set ambitious targets for reducing greenhouse gas emissions. In 2019, China announced a plan to achieve carbon neutrality by 2060. The government has also set targets for reducing coal consumption, increasing renewable energy, and improving energy efficiency.

Innovation, Sustainable Production and Consumption

China's national innovation strategy has been a driving force for economic growth. The government has invested heavily in research and development, and the country has become a major player in the global innovation landscape. China's manufacturing sector has also undergone transformation, with a shift towards more sustainable and efficient production methods.

Green Energy, Involved and Used

Existing investment will be supported. Any new investments that meet certain criteria will be received well. Funding will be provided for environmentally friendly projects. Government will promote green energy, and encourage further investment in this field. The government has already invested in renewable energy projects, and is committed to increasing the country's energy independence and sustainability.

China continues to press ahead with new energy projects. The country has already achieved significant milestones in its renewable energy sector. The government has set ambitious targets for the development of solar and wind power. The government has also introduced a range of policies to encourage the use of new energy, including subsidies for electric vehicles and renewable energy generation.
